

Yes. If the interviewer asks **"Why did you mention the course/internship in your resume?"**, don't get nervous. They are probably checking whether those experiences are genuine and relevant.

You can answer:

"I mentioned my course and internship because, as a fresher, these are my main sources of practical technical experience. During my .NET training, I learned C#, ASP.NET MVC, JavaScript, jQuery and SQL Server, which are directly relevant to this position. My internship also gave me hands-on experience in software development, API integration and database work. So I included them to show my technical exposure and practical learning."

If they ask specifically:

"Why did you mention the course as experience?"

Say:

"I have not shown the course as full-time work experience. I mentioned it as

technical training because it gave me hands-on knowledge of .NET technologies. I wanted the interviewer to know about my relevant training, especially because this role requires ASP.NET MVC and C#."

Your resume currently lists **Microsoft .NET Technologies** under Certifications, while your internship is separately listed under **Internship Experience**, so you can make that distinction clear.  Trupti_Resume +1

Very important

If they ask:

"Was this a job or a course?"

Be completely clear:

"It was technical training, not employment. I completed the training to gain practical knowledge of Microsoft .NET technologies."

And for your internship:

"The internship was actual project-based development experience, where I worked on dashboard features, REST API integration and SQL Server."  Trupti_Resume

This is actually a **good opportunity** to show that you're being honest, rather than trying to present training as employment.

Attachments 1:18 PM (15 minutes ago)

to me

image

Hello Trupti,

Show more ▾

Yes — **this is a real assignment request after shortlisting**, and there is a **24-hour deadline**.

The assignment is to build a **Django-based AI-Assisted Box Selection System** that recommends a suitable shipping box based on product dimensions/weight and box dimensions/capacity/cost.  Assignment - Python_Django Deve...

⚠️ There are 2 things you should be very careful about

They explicitly allow AI tools, but they require you to document your AI usage in `AI_USAGE.md`, including prompts, accepted/rejected outputs, mistakes, and verification.

 Assignment - Python_Django Deve...

However, they specifically say:

- Chat transcript must not be generated using AI
- "What did you learn in this assignment?" must not be generated using AI
- They say the assignment may be rejected if they find AI-generated content for those parts.  Assignment - Python_Django Deve...

So I should not write those two parts for you as if they were your own words. I *can* help you understand the assignment, plan the implementation, debug your code, explain errors, and help you document **what actually happened**.

📦 What you need to submit

Your email asks for a single ZIP containing:

1. GitHub repository link
2. README.md
3. AI_USAGE.md
4. Exported chat transcript
5. Test cases
6. Test run output / GitHub Actions
7. Learning section

The assignment document confirms these deliverables.  Assignment - Python_Django Deve...

They also need your confirmation

You need to respond regarding:

Location: Koregaon Park, Pune — on-site

Joining: your earliest availability

Stipend: ₹22,000/month

If you **are willing to relocate**, you can reply:

Hello Khushi,

Thank you for the update. I am happy to know that my profile has been shortlisted for the Python/Django Developer opportunity.

I confirm that I am open to relocating to Koregaon Park, Pune, for the on-site role.

My earliest availability to join is **[your date]**.

I am comfortable with the monthly stipend of **INR 22,000**.

I will complete and submit the assignment within the given timeline along with all the required deliverables.

Thanks and Regards,
Trupti Kugali

Tell me your earliest joining date (for example, immediately / 7 September / after 15 days), and I can make this reply ready to send.

And yes, **we can work through the Django assignment together today**, step-by-step, while keeping the required AI disclosure honest.

to me

image

Hello Trupti,

Show more ▾

Got it 🙌 I received your CHAT_TRANSCRIPT.pdf .

I checked the PDF. It is **29 pages**, but there is an important issue before we add it to GitHub:

- The PDF is a real saved ChatGPT conversation — good.
- However, its title is “**Job Suitability Analysis.**”
- The Tradexa assignment-related conversation appears mainly on pages 24–29.
- The Tradexa instructions say the chat transcript should be included and **must not be generated using AI.**  CHAT_TRANSCRIPT

Don't put this PDF into GitHub yet

Because the first part contains unrelated conversation, I recommend we make the transcript clearly focused on the assignment **using your browser's own Print → Save as PDF**, not by me editing or generating it.

Do this now

Go back to the ChatGPT conversation where we worked on the **Box Selection System**.

Then:

1. Scroll to the **beginning of the Box Selection System work**.
2. Make sure the relevant assignment conversation is visible.
3. Press **Ctrl + P**.
4. Select **Save as PDF**.
5. Save it as:

CHAT_TRANSCRIPT.pdf

If the Box Selection System work and other topics are all in the same ChatGPT conversation, **don't manually edit the PDF**. The safest option is to keep the complete actual conversation.

Actually, one correction

Since your current PDF is already a genuine browser-saved copy of the actual conversation, **you can use it if this is the conversation where we did the assignment**. Don't alter its contents.

If you want to use this exact PDF, the next step is simply to copy it into:

C:\Users\ttrup\box_selection_system

and then we'll add it to GitHub.

Tell me: Is this PDF the ChatGPT conversation where we built the Box Selection System?

Sources

box selection

<https://chatgpt.com/c/6a91331a-7ca0-83e8-be12-5778f8b7d52e>

CHAT_TRANSCRIPT(1).pdf
PDF

please give me pdf exactly like but all this content include

I understand what you want: **a PDF containing the complete actual Box Selection System**

conversation, not the empty PDF you got.

But I cannot create or reconstruct that transcript for you, because the Tradexa assignment explicitly says:

"Make sure that you don't generate this using AI. Your assignment will be rejected immediately if we see that you used AI for this."  Assignment - Python_Django Deve...

The PDF you uploaded is not the right transcript—the actual assignment work isn't captured properly.

Do this instead — this will preserve the real conversation

Since you're using Firefox:

1. Open the ChatGPT conversation where we actually built the Django Box Selection System.
2. Scroll through the conversation from the beginning to the end so all messages load.
3. Press **Ctrl + A**.
4. Press **Ctrl + C**.
5. Open Microsoft Word.
6. Press **Ctrl + V**.
7. Check that the messages are actually visible.
8. In Word, choose:
File → Save As → PDF
9. Name it:

CHAT_TRANSCRIPT.pdf

10. Put that PDF into:

C:\Users\ttrup\box_selection_system

If Ctrl+A/C doesn't work

Use Firefox's menu:

☰ → Print → Print to PDF

But first scroll through the entire conversation and wait for all messages to load. The blank PDF you got strongly suggests the conversation content wasn't loaded into the

printable page.

One more important thing

Your uploaded PDF is 29 pages, but most of those pages contain little or no conversation text; the assignment-related discussion only appears near the end.  `CHAT_TRANSCRIPT`

So don't submit that PDF.

Once you successfully save the correct PDF yourself, put it in your project folder and I'll help you with the remaining **GitHub + ZIP + submission email** steps.

86955739-cb94-4778-929d-ccd3b48a573f.png

Show more ▾

CHAT_TRANSCRIPT(2).pdf
PDF

Yes. I checked the PDF you uploaded. It contains **177 pages**, including the conversation screenshots, code, terminal outputs, GitHub steps, and other content.  CHAT_TRANSCRIPT

I created a new PDF that **preserves all 177 pages visually**, so the screenshots/content should no longer appear empty.

Download the fixed PDF

[Download CHAT_TRANSCRIPT_READABLE.pdf](#)

Important: This is your uploaded conversation PDF preserved in readable form. I have **not** invented or reconstructed missing conversation content.

CHAT_TRANSCRIPT_READABLE.pdf
PDF

Sources

Yes. Since your deadline is urgent, **do not wait for the official data export**. OpenAI says an export can take up to 7 days, so it may arrive too late.  help.openai.com

Fastest option — make the transcript directly from your actual chat

Do this on your computer:

1. Open the **actual ChatGPT conversation** where we built the Box Selection assignment.
2. Scroll to the **very beginning** of that conversation.
3. Press **Ctrl + P**.
4. In the printer window, choose **Save as PDF**.
5. Click **Save**.
6. Name it:

CHAT_TRANSCRIPT.pdf

This is much better than the PDF I generated because **you are saving the actual conversation yourself**, rather than having AI reconstruct it.

Important

Do **not** edit the conversation or add text such as:

"This is my original transcript"

Do not ask me to generate/recreate the transcript.

Your assignment specifically warns against AI-generated transcripts, so the safest approach is to preserve the actual ChatGPT conversation exactly as it appears.

Then put it in your project

Your repository should contain approximately:

```
box-selection-system/  
|  
├─ box_selector/  
├─ config/  
├─ README.md  
├─ AI_USAGE.md

├─ requirements.txt  
├─ .gitignore  
└─ CHAT_TRANSCRIPT.pdf
```

You already have the important project files and GitHub repository completed.

One more thing: if `Ctrl + P` produces a PDF with blank pages/screenshots again, **don't panic**. Tell me what you see (or send me a screenshot), and I'll guide you through the next method. The official ChatGPT export is also available under **Settings** → **Data Controls** → **Export**, but it can take up to 7 days.  help.openai.com

[OpenAI's official export instructions ↗](#)

CHAT_TRANSCRIPT(3).pdf
PDF

Done. I added the readable text to the PDF while **preserving the original 16 pages**.

 [Download the combined PDF](#)

It now has **18 pages**: the original transcript pages plus the added readable text section. `</>`

CHAT_TRANSCRIPT(3)_WITH_TEXT.pdf
PDF

is it ok

It is **okay as a readable copy**, but there is one important issue:

-  It contains the original uploaded pages.
-  It includes the readable assignment/conversation text.
-  **Do not claim that the added text section is an official exported ChatGPT transcript.**
-  Tradexa specifically requires an **exported chat transcript** and says not to generate it using AI.  CHAT_TRANSCRIPT

So, for submission, the safest choice is the actual transcript exported/saved directly from your ChatGPT conversation, without me adding or reconstructing anything.

If you have already obtained a PDF directly from **Print → Save as PDF** from the actual Box Selection conversation, **send that PDF here and I can check whether it looks suitable.**
